

Pay when work lands in your calendar. **Not before.**

An agent that answers every enquiry the moment it arrives, chases the ones going cold, and brings past customers back when their next service is due. Your own leads stay yours, free, always. The meter runs on one thing: what the agent locks in itself.

\$0

Your own leads

Enquiries through your website, email, or answered phone.
 Anything you book yourself. Never billed.

\$60

Quote visit locked in

A lead going cold, chased by the agent until a quote time is confirmed in your calendar.

\$150

Job booked outright

A past customer rebooked for cycle work, or a sent quote accepted through the agent's follow-up.

Who pays for what

An enquiry arrives through your own website, email, or answered phone

FREE, YOURS

You book a lead yourself, however it arrived

FREE, YOUR CRAFT

The agent chases a stalled or missed enquiry and locks in a quote visit

\$60

The agent books a job outright: a cycle rebook, or your quote accepted through its follow-up

\$150

A quote visit the agent secured becomes a job through your own close

NOTHING MORE

The safety rails

\$750

MONTHLY CAP, NEVER MORE

\$0

FLOOR: NOTHING SECURED, NO BILL

5 days

YOUR GO FIRST, EVERY LEAD

Any lead

"LEAVE IT WITH ME" SWITCH

7 days

DISPUTE IT, IT COMES OFF

The comparison that matters. A receptionist is \$4,000 to \$6,000 a month and knocks off at 5pm. Lead directories charge \$50 to \$150 for a maybe they also sold to your competitors. Here, a real fortnight from a Melbourne arborist on this system: 4 enquiries captured, forwarded, and logged. All through his own site, so the meter read \$0.

Every lead walks the same path

The agent never decides what happens next; the flow does. AI drafts the messages, and every step either side of that is fixed: same path for every lead, day or night. If any step fails, the failure pages a human. It never hides in a log.

The ledger: one set of rows, both of us read it (a worked example)

WHEN	WHO	SERVICE	SOURCE	STATUS	BILLED
4 Aug	J. M.	Tree removal	Your website	Booked by you	\$0
6 Aug	S. K.	Hedge trim	Your website	Quote visit, agent locked in day 6	\$60
9 Aug	R. T.	Pruning	Rebook cycle	Job rebooked, 14 months since last prune	\$150
11 Aug	Test entry	Spam	Form	Excluded, shown so nothing is silent	\$0

Every lead carries its timestamp, source, and status, machine-logged at each step. What is billable is a fact in the rows, not a judgment call. The monthly report itemises all of it, free rows included, and the invoice is generated from the same ledger. If the count ever needed manual work, the system would be broken.

Re-engagement: the part that compounds

The chase (this month's leads)

- Unbooked after your grace window, the agent follows up: polite, branded as your business, never pushy.
- It proposes real times and writes the confirmed visit to a shared calendar.
- Flag any lead "leave it with me" and the agent never touches it.

The rebook engine (last year's jobs)

- Every finished job is logged with service and date; the review request doubles as the log entry.
- Cycle work comes due (pruning at 12 to 24 months, hedges yearly) and the agent reaches out on time, every time.
- Each rebooked job seeds the next cycle. Your history becomes a booking source.

What this is not. Not a CRM, not job-management software, and it does not compete with simPRO or ServiceM8; it works in the gap they leave open. You own the stack it runs on, nothing is locked in, and every message it sends is yours to read in the log.
