

Pay when a service call lands in your calendar. **Not before.**

Meet Kelpie: the agent that answers every enquiry the moment it arrives, even at 2am, chases quotes going cold, and books planned maintenance when it falls due. Genuine emergencies route straight to your on-call tech, untouched. The meter runs on one thing: what Kelpie locks in itself.

\$0

Your own leads

Enquiries through your website, email, or answered phone.
 Anything you book yourself. Never billed.

\$60

Service call locked in

A lead going cold, chased by Kelpie until a call-out time is confirmed in your calendar.

\$150

Maintenance booked

A planned-maintenance round booked when due, or a lapsed contract revived onto the schedule.

Who pays for what

An enquiry arrives through your own website, email, or answered phone

FREE, YOURS

You book a lead yourself, however it arrived

FREE, YOUR CRAFT

Kelpie chases a stalled or missed enquiry and locks in a service call

\$60

Kelpie books planned maintenance when it falls due, or revives a lapsed contract

\$150

A service call Kelpie secured becomes a contract through your own close

NOTHING MORE

The safety rails

\$750

MONTHLY CAP, NEVER MORE

\$0

FLOOR: NOTHING SECURED, NO BILL

5 days

YOUR GO FIRST, EVERY LEAD

Any lead

"LEAVE IT WITH ME" SWITCH

7 days

DISPUTE IT, IT COMES OFF

The comparison that matters. The operator who answers first gets the cool room. Kelpie answers in seconds at any hour, parks non-emergencies as clean morning tickets, and never lets a service-due date pass. A receptionist doing this is \$4,000 to \$6,000 a month and knocks off at 5pm.

Every lead walks the same path

Kelpie never decides what happens next; the flow does. AI drafts the messages, and every step either side of that is fixed: same path for every lead, day or night. If any step fails, the failure pages a human. It never hides in a log.

The ledger: one set of rows, both of us read it (a worked example)

WHEN	WHO	SERVICE	SOURCE	STATUS	BILLED
4 Aug	Cafe	Cool-room fault, 11:40pm	Missed call	Morning ticket, booked by you	\$0
6 Aug	Restaurant group	New cool-room quote	Your website	Service call, Kelpie locked in day 5	\$60
9 Aug	Butcher	Planned maintenance	Service-due calendar	Maintenance booked on due date	\$150
11 Aug	Test entry	Spam	Form	Excluded, never silent	\$0

Every lead carries its timestamp, source, and status, machine-logged at each step. What is billable is a fact in the rows, not a judgment call. The monthly report itemises all of it, free rows included, and the invoice is generated from the same ledger. If the count ever needed manual work, the system would be broken.

Re-engagement: the part that compounds

The chase (this month's leads)

- Unbooked after your grace window, Kelpie follows up: polite, branded as your business, never pushy.
- It proposes real times and writes the confirmed visit to a shared calendar.
- Flag any lead "leave it with me" and Kelpie never touches it.

The service-due engine (every contract, watched)

- Every completed job logged with equipment and date; the job-done note doubles as the log entry.
- Planned maintenance, pre-summer checks and filter cycles fall due; Kelpie reaches out ahead of time.
- Each completed round seeds the next. Maintenance revenue stops depending on someone remembering.

What this is not. No competitor to simPRO or ServiceM8; Kelpie works in the gap they leave open. Real emergencies are never automated: a breakdown with stock at risk goes straight to your on-call tech, untouched. You own the stack, and every message is yours to read in the log.
