

Virtual PA

A personal assistant for each partner, that knows your whole book.

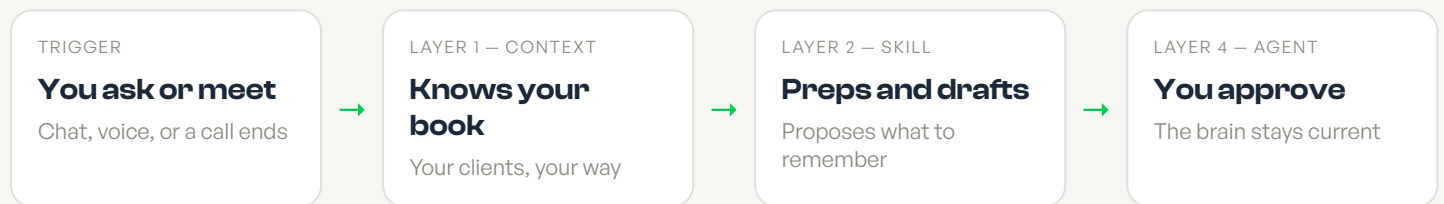

THE COST TODAY

The day runs you. No time to prep, think, or get ahead of the work.

WHAT IT DOES

- Ask what is on today and get your meetings, clients, and deadlines in one brief
- Say prep me for my 2pm and get the client file, last note, open items, and talking points
- Drafts replies, schedules, declines, and reschedules on your word
- Capture by voice or chat: log that we agreed X, remind me to send the letter Monday
- After a meeting, hands you the file note, the actions, and the follow-up draft

HOW IT WORKS

HOW IT STAYS CURRENT

Capture, draft, approve, commit

Meetings (via Fireflies or Fathom) and voice notes are captured automatically. The PA drafts the note, the actions, and a short list of proposed updates to the brain. You tap approve on each fact worth keeping, and only then does the brain update. The AI never edits the brain on its own, every durable change is human-approved and logged. Recorded client meetings carry a one-line consent, which we set up.

WHERE IT GOES

One partner's PA

Knows your book

A PA per partner

All on one shared brain

A firm-wide ops agent

Slack, SMS, and voice

Prepped

for every meeting

Humans write, AI reads.

The brain is edited only by your people, through a review step. Nothing ships without sign-off, and you own the whole stack.
